

Macduff Robotics

Intelligent Subsea Equipment

Subsea cable reel suitable for deploying a sensor or camera from the host ROV. The unit is also suitable for use as a TMS for a slave observation vehicle on a work class vehicle.

Can deploy in excess of 80m of cable depending on cable diameter, with spooling controlled by level wind.

Cable Reel/TMS

MAIN FEATURES

- Hydraulically powered.
- Spool in/Out speed and line pull independently adjustable.
- Upto 60kg line pull.
- Levelwind adjustable for differing cable diameters – cable bend radius permitting.
- Copper and/or fiber optic slip ring can be accommodated.

Further Information

Advanced/Remote spares kits also available

Equipment supplied

Standard tool supply includes:

- Reel Unit
- ROV connection hoses
- Basic Spares
